

How to add a new material to material table

This tech tip will look at how to add a new material to the material table in ST8.

To add a new material to the material table in ST8 you will need to:

- Open a new Solid Edge document.
- Click SE application button -> properties -> Material table
- Once Material table is open move down the folder structure to where you would like the material to be located. (aluminium, non-metals, etc)
- Then when you have located where you would like to place the material, Right Mouse Button (RMB) on the folder directly above this location.
- In the RMB dialogue click the add new material option.
- Once the material is added you will need to name it accordingly and add all the desired variables in the properties table and select a face style if desired.
- Click the save button; the new material has now been added.
